corresponding textbook section

Section 9.4

- **lecture content**
  - introduction of the beat histogram
  - low level features used to describe rhythmic properties

- **learning objectives**
  - explain the terms beat histogram and beat spectrum and how they related to each other
  - describe two low level features derived from the beat spectrum and discuss their musical meaning and limits

Section 9.4

- **lecture content**
  - introduction of the beat histogram
  - low level features used to describe rhythmic properties

- **learning objectives**
  - explain the terms beat histogram and beat spectrum and how they related to each other
  - describe two low level features derived from the beat spectrum and discuss their musical meaning and limits
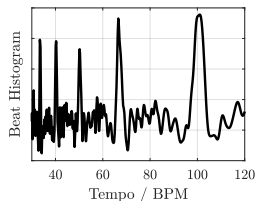

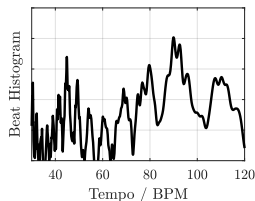

beat histogram
problem statement

- previously introduced low-level features not suitable for temporal or rhythm description
- onset, beat, and downbeat detection either error prone or complicated

$\Rightarrow$ "robust" low level representation focused on tempo and rhythm:
  beat histogram/spectrum

beat histogram
introduction

beat spectrum or **beat histogram**:

- x-axis (BPM or inter-onset-time)
- y-axis ('strength' of periodicity or number of occurrences)
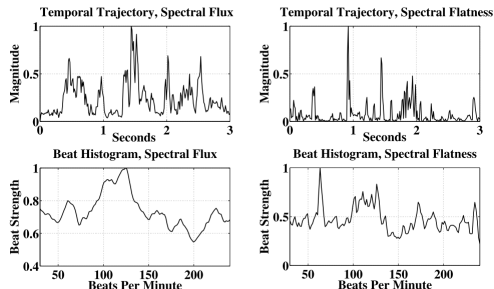

- compact representation of periodicities

matlab source: plotBeatHistogram.m

beat histogram
input

Georgia | Center for Music
Tech | Technology
College of Design

1 option 1: novelty function
- time domain features: envelope, rms
- spectral differences: flux, ...
- any other feature meaningful for rhythm description

2 option 2: series of onset times

beat histogram
transform

1 option 1: frequency transform
- magnitude spectrum
- filterbank

2 option 2: ACF
- ACF maxima indicate periodicity periods

3 option 3: histogram
- measure inter-onset-intervals
- sort them into bins and plot number of occurrences

beat histogram
feature examples

Georgia Tech | Center for Music Technology
College of Design

- **statistical features**
  - mean, centroid, standard deviation, kurtosis, . . .

- **peak features**
  - value and position of absolute max
  - ratio (value and position) of strongest and 2nd strongest peaks

- **other features**
  - flatness, crest, high frequency content, MFCCs (??),. . .
  - features from ACF of beat histogram

rhythm description
general questions

Georgia **Center for Music**
Tech **Technology**
College of Design

- what are the salient perceptual properties of rhythm?

- what rhythms are perceptually similar?

- should a rhythm description be tempo dependent or not?

- what role does micro-timing play?

- should rhythm descriptors be normalized to bar length?

summary
lecture content

Georgia | Center for Music
Tech | Technology
College of Design

- **beat histogram or spectrum**
  - some frequency domain representation of novelty/ onsets
  - usually characterizing the periodicities

- **beat histogram features**
  - low level features characterizing the beat spectrum
  - often statistical descriptors
  - easy to extract but limited meaning
